

LANDesk Made Easy! The nAppliance ITDirector is a complete, affordable system, security and process management solutions that help IT team automate and simplify the management of desktops, servers, and mobile devices. Powered by LANDesk's, our Net-Manager ITDirector series of appliances deliver rapid innovation and time to value to help enterprises of all sizes achieve their business objectives. Easy-to-use LANDesk® systems, security and process management solutions are developed to help administrators and their enterprises to:

- Do more with less effort, expense and training—and with little or no new infrastructure.
- Provide enterprise management platform experience that helps them make their workdays less stressful and the value they bring to their enterprise more noticeable.

Integrated Management Appliance: LANDesk Software Options

A worldwide leader in convergence of the systems, security, process and service management market, LANDesk solution suite is the most comprehensive and integrated system in the market. The key software options include:

- **System Lifecycle Management (Core):** Unified management manages every IT device with ease. Accomplish more of what matters with less effort, expense, training and infrastructure. Helps keep your servers, workstation and applications available and running and track IT and non-IT corporate resources. Agent less, automatic, accurate and up to date.
- **Asset Life Cycle Manager (ALM):** Accurate asset knowledge, accountability and control. Provides structured asset repository that extends the management of your organization's hardware and software assets by starting before the asset exists and going beyond when the asset is retired, it helps reveal the true value of IT systems to allow better planning decisions, informed business analysis and improved business capacity.
- **Endpoint Security Management (ESM):** Improve visibility, extend corporate infrastructure efficiently and enforce network access control and compliance to keep all endpoints secure, local or remote.
- **IT Service Helpdesk Management (ITSM):** Managing the end-to-end delivery of business-aligned, quality IT services helps transform a reactive environment to a more proactive and service oriented one.

The Most Affordable Enterprise-Grade IT Systems Management Solution on the Market:

- ✓ Provides a Turnkey best-in-breed production ready hardware, software, services and support solution.
- ✓ An Affordable enterprise wide management solution, LANDesk has features at the level of any other competitive product in its class. ITDirector pricing is much more reasonable however, geared towards small enterprises starting with as low as 100 users and scale up to 2000+ users' large enterprise deployments.
- ✓ ITDirector is significantly more cost-effective than software based management solutions as there is no hardware to buy or issues to attend, no operating system or software installation, setup and configuration, no SQL database purchase for some of the core modules or integration headaches and no security holes to patch.

ITDirector is a cost-effective, high performance, easy to use all-in-one "small and mid-size enterprises" IT infrastructure management appliance.

ITDirector is the first integrated product in its class with comprehensive manageability, systems life cycle management, end-point security management, IT service management and enterprise wide operation management capability, all into one easy to use, purpose built appliance platform.

Key Features and Benefits:

- **Purpose-Built, Comprehensive Systems, Security and Process Management Appliance Platform:**
An "All-In-One" management system appliance which combines the power of systems lifecycle management, server and asset management, endpoint security management and IT service helpdesk management without the deployment complexity or high costs typically associated with other Tier-1 solutions. It is designed to accomplish more of what matters with less efforts, expense, training and infrastructure.
- **Helps Meet the Most Demanding Compliance Standards:**
 - Regulatory requirements for industries of all sizes and types which includes financial services, healthcare, educational, government, and other industries.
 - Optimize IT estate and ensure best practice software asset management and license compliance.
 - Business continuity standards and ITIL process compliance with workflow, messaging, asset management, network security, systems management, customer support and services through its robust reporting capability.
- **Easy to Use, Easy to Deploy, Fast Delivery Appliance Platform:**
Helps increase productivity by reducing deployment complexity, a plug-and-play solution offering hardware and software management and no vendor finger pointing. Designed for organizations who want a highly tuned, pre-configured, hardened IT systems management solution with virtually very little or no maintenance. The ITDirector can be deployed within hours, no need to spend weeks installing, configuring and fine tuning various systems and networking components.
- **Enterprise Grade, Fully Integrated Turnkey Systems and Service Management Appliance Platform:**
ITDirector appliance provides everything an organization needs, It
 - Uses a future-proof technology platform which is built using industry standard hardware, operating system and the most powerful database in the market. Powered by Microsoft Windows Server, Microsoft SQL Server and feature rich LANDesk's Suite of software's which helps:
 - Manage a wide spectrum of heterogeneous IT systems and network client security Infrastructure, corporate assets and customer service helpdesk.
 - Provides familiar windows look and feel thru MMC controls for seamless integration into your existing enterprise Domain and Active Directory infrastructure.
 - Specifically designed for mission critical high volume concurrent transactions, it provides unparallel performance, scalability, availability and remote administration.
 - Incorporates fault tolerance for key hardware components and key services, it is highly tuned for maximum performance and uptime.
 - It provides a systems solution that is always available and scalable thru Hyper-V server clustering for failover and performance.
 - Administrators can manage and monitor the server hardware remotely thru a web browser for system health status, automatic restart, and graceful system up and down status management.

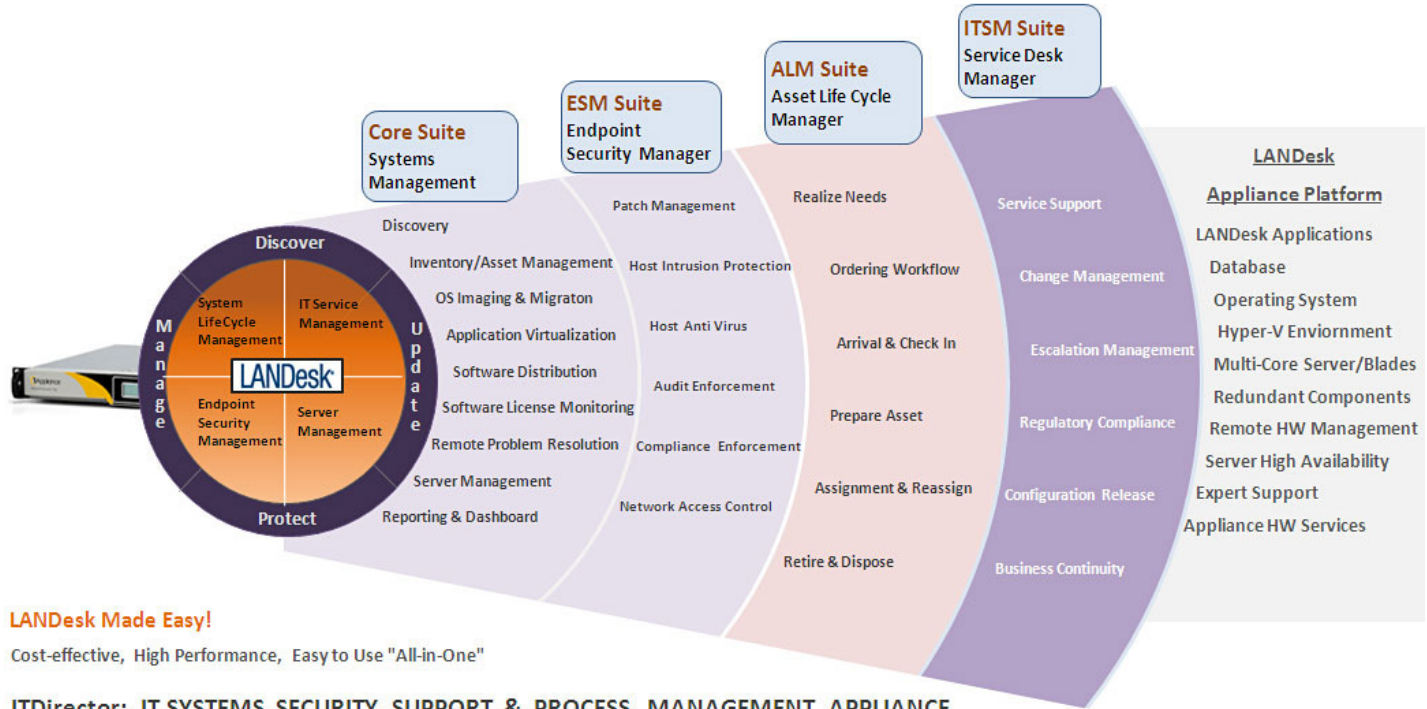

Simplify IT Cost and Complexity with LANDesk Solutions

Is change the only constant in your workday? Are you forced to do more and be accountable for more, but with fewer resources? Does your IT team juggle solutions from multiple vendors with the accompanying complexity, maintenance and cost burdens? If so then you're ready for the relief you'll experience with the LANDesk® IT management platform.

Developed with your IT and business needs in mind, the LANDesk IT management platform—encompassing systems lifecycle, endpoint security, process automation and service desk management solutions—enables IT to help power your enterprise and achieve your business objectives.

Choose the LANDesk® IT management platform and equip IT staff to:

- Reduce IT costs and complexity with single-console management of any system from anywhere.
- Completely secure all of your deployed systems.
- Automate and control your IT processes.
- Integrate your service desk and systems management functionality..
